

MEPS NURSING HOME COMPONENT  
FILE NHC-002

PERSON CHARACTERISTICS, FULL-YEAR DEMOGRAPHICS  
INCOME AND ASSETS

This file provides information collected on a nationally representative sample of the nursing home population of the United States for calendar year 1996. A person-level file (one record per person), it contains data obtained in Rounds 1, 2, and 3, for a sample of 5,899 persons. It includes persons sampled as January 1, 1996 residents, as well as those sampled as an admission during the year. The file variables pertain to basic demographics, prior use of long-term care, family relationships, income and asset data including home ownership, pivotal date and place variables (e.g., dates of NH admission, date of death, etc.), characteristics about the nursing home resident's spouse, and sampling and variance estimation variables. These data items correspond with questions from: (1) the Facility Background and Insurance Questionnaire (the BQ questions), (2) the background section of the Community Questionnaire (the BQ questions), (3) the income and assets questions from the Community Questionnaire (IA questions), (4) the income questions from the Expenditure Questionnaire (the IA questions), (5) the Facility Residence History Questionnaire (RH questions), and (6) the residence history section of the Community Questionnaire (RH questions). Most of the data items provided on this file have been edited and imputed. To obtain national estimates for the variables on this file, the sampling weight provided on this file must be used.
